Section 01

MySQL Workbench

This photo shows the acmeInventory connected as well as the SQL select statement

The screenshot displays the MySQL Workbench interface. On the left, the 'Navigator' pane shows the 'acmeInventory' database schema with tables like 'customer', 'item', 'itemCategory', 'orderItem', and 'orders'. The 'SQL Editor' pane in the center contains the query: `select * from item where quantityAlert > quantityInStock;`. Below the editor, the 'Result Grid' shows the query results for 4 rows. The 'Output' pane at the bottom shows the execution log, including messages like '0 rows affected' and '4 rows returned'.

SDCLambda IAM role

The screenshot displays the AWS IAM console interface for the 'SDCLambda' role. A green banner at the top indicates 'Policy was successfully attached to role.' The left sidebar shows the navigation menu with 'Roles' selected. The main content area shows the role's summary and permissions.

Summary

- Creation date:** August 24, 2025, 16:25 (UTC-05:00)
- Last activity:** 6 days ago
- ARN:** `arn:aws:iam::311141562966:role/SDCLambda`
- Maximum session duration:** 1 hour

Permissions policies (3)

You can attach up to 10 managed policies.

Policy name	Type	Attached entities
AmazonSESFullAccess	AWS managed	1
AWSLambdaVPCAccessExecutionRole	AWS managed	1
CloudWatchFullAccess	AWS managed	1

Permissions boundary (not set)

SDCNotifyRDS Lambda Function

The screenshot displays the AWS Lambda console for the function `sdNotifyRDS`. A green notification bar at the top states: "The test event 'InventoryTest' was successfully saved." The console is divided into several sections:

- Code source:** Shows the Python code for `lambda_function.py`. The code defines a `send_email` function and a `lambda_handler` function. The handler prints a message and sends an email using the `pymysql` library. The email content is: "The following items have triggered an inventory alert.

".
- Deploy:** Includes buttons for "Deploy (Ctrl+Shift+U)" and "Test (Ctrl+Shift+I)".
- Test events:** A list of test events is shown, including "InventoryTest".
- Execution Results:** The status is "Succeeded". The response is: `{ "statusCode": 200, "body": "sdNotifyRDS: 200, 200" }`.

On the right side, there is a "Tutorials" section with a link to "Create a simple web app" and a "Start tutorial" button.

Lambda Test Successful

The screenshot displays the AWS Lambda console interface for the function 'sdNotifyRDS'. At the top, a green notification bar states: 'The test event "InventoryTest" was successfully saved.' Below this, the 'Diagram' tab shows the function's architecture with a box labeled 'sdNotifyRDS' and a 'Layers' section indicating '(0)' layers. To the right, the 'Description' panel provides details: 'Last modified 7 minutes ago', 'Function ARN: arn:aws:lambda:us-east-1:3111141562966:function:sdNotifyRDS', and 'Function URL: https://5gl26hgzt6mfblou7mebojry0pvzmv.lambda-url.us-east-1.on.aws/'. Below the diagram, tabs for 'Code', 'Test', 'Monitor', 'Configuration', 'Aliases', and 'Versions' are visible, with 'Test' currently selected. A green status bar indicates 'Executing function: succeeded (logs [2])'. The 'Test event' section includes instructions on how to invoke the function and offers options to 'Delete', 'CloudWatch Logs Live Tail', 'Save', or 'Test'. Under 'Test event action', the 'Edit saved event' option is selected. The 'Event name' field is present but empty. On the right side of the console, a 'Tutorials' sidebar is visible, featuring a section titled 'Create a simple web app' with a list of steps and a 'Start tutorial' button. The bottom of the page shows the footer with '© 2025, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'.

Postman executed successfully

AWS (photo 1) and Postman (photo 2) email successfully received
